

**CLIENT:** International Textile Group  
**PROJECT:** Corporate Servers/Data Management

About the Company

International Textile Group (ITG) was formed in 2004 by WL Ross & Co. to combine the assets of leading textile manufacturers, including Burlington Industries and Cone Mills. ITG is a diverse, innovative provider of global textile solutions and distinguished fabric brands to automotive, apparel, interior furnishing and industrial markets worldwide. By building extraordinary performance into everyday products, ITG produces highly engineered and technical products, which add value and distinction to brands.

The Challenge

ITG's current international expansion has created the need for a more robust technology infrastructure. As a result, ITG came to Dynamic Quest with a need for enhanced support services, advanced business recovery capabilities, and reduced operational and infrastructure overhead. More importantly, ITG was in need of establishing generator power, consistency in backups, and a disaster recovery plan in order to meet the standards of Sarbanes-Oxley. Prior to the partnership with Dynamic Quest, ITG leased about 70% of their servers resulting in a costly IT infrastructure.

Dynamic Quest was to help ITG meet the high standards of Sarbanes-Oxley, while reducing the high cost of the current IT infrastructure.

The Solution

Dynamic Quest migrated and virtualized 85% of ITG's corporate servers; therefore ITG was able to go from 140 servers to under 30 physical servers, still maintaining 140+ server environments. Successful migration of the servers to the new Dynamic Quest datacenter allowed ITG to meet the standards of Sarbanes-Oxley and benefit from enhanced support services. Dynamic Quest owns and is responsible for the hardware components used by ITG, which allows ITG to reduce the maintenance cost of its IT environment. In addition, ITG relies on Dynamic Quest for other responsibilities such as:

- **Managing email**
- **Managing Blackberry services**
- **Hosting 140 Server environments**
- **Hosting 3 Corporate AS/400s**
- **OS Patch management**
- **24 hour helpdesk support**
- **Backup and monitoring**
- **Disaster Recovery**

Corporate Servers and Data Management

The Result

Virtualization of their IT environment resulted in an enormous cost reduction. In addition, Dynamic Quest engineers are ensuring the peak performance of ITG servers through IT maintenance and helpdesk support. Upon the successful completion of this project ITG has met the standards of Sarbanes-Oxley, enabling the company to further expand its growth and better manage its IT environment.

**Client Name:**  
**ITG**  
**International Textile Group**

**Project:**  
**Corporate Servers and Data Management**

**Services Performed:**  
**Migration/Virtualization of Multiple Servers**

"We are very fortunate to have the resources of a local company that offer a full complement of diversified services. Utilizing these advanced resources, we are able to create a win-win partnership for both ITG and Dynamic Quest."
